

Amazon Searcher: Instructions for Installation and Use (Mac)

Installation:

1. Install heroku at the following url: <https://toolbelt.heroku.com/osx>
2. Open a terminal (cmd+space to open up spotlight search. Type “terminal” in the search bar followed by enter)
3. Type the following: git
4. Install git using the installation wizard
5. Navigate to preferred installation directory
6. Type the following: heroku git:clone -a secret-falls-9170
7. If you are asked for a username and password, [username=lee.weisberger@duke.edu](mailto:lee.weisberger@duke.edu)
password=password
8. Navigate into the newly created folder (type: cd secret-falls-9170)
9. Type chmod +x updatator.command

Use:

- The application is set to run automatically every hour on the hour
- If you want to change the excel spreadsheet:
 - Navigate to the secret-falls-9170 directory using finder
 - Open Amazon_Form in excel (not the.csv file!)
 - Make changes and save
 - Double click updatator.command to commit the changes
- If you want to remove the automatic hourly emails
 - Navigate the following url <https://scheduler.heroku.com/dashboard>
 - Username: lee.weisberger@duke.edu
 - Password: password
 - Click the remove link
- If you want to re-administer the automatic hourly emails
 - Navigate the following url <https://scheduler.heroku.com/dashboard>
 - Username: lee.weisberger@duke.edu
 - Password: password
 - Click “Add new job”
 - Paste the following into the white text box: sh target/bin/finder
 - Change frequency to Hourly
 - Click save
